## **DATABASE LAB**

**Objective:** This lab enables the students to practice the concepts learnt in the subject DBMS by developing a database for the case studies named “Roadway Travels” and “Internet Book shop” whose description is given. The student is expected to practice the designing, developing and querying a database in the context of case studies.

**Introduction to SQL Commands:** Queries on employee database should be exercised.

### **Case Study 1:**

#### **Road Way Travels:**

Roadway travels is an online ticket booking system which consists of major operations like

- Reservation and ticketing
- Cancellation

Reservations can be made 30 days in advance cancellation should be made at least 1 day before the journey date. (use triggers for assuring)

Payments can be made by credit/debit card. The system should maintain the data of buses, passengers, tickets, reservations, cancellations.

The above process involves many steps.

1. Analyzing the problem and identifying the entities and relationships.
2. ER Model
3. Normalization
4. Creating Tables.
5. Implementing Queries
6. Use triggers to check the maximum capacity of buses
7. Generate Reports

### **Case Study 2:**

#### **Internet Book shop**

The customers should be able to browse the catalog of books and place order over the internet. The customers should give the ISBN number of a book and a quantity and payment can be done by credit/Debit card. Then the shipment must be prepared with the books they ordered. If required number of copies are not available the shipment must be delayed until the new copies arrive. The major operations are

- Placing orders
- Shipment

For each book, the catalog contains its ISBN number, title, author, purchase price, sales price and the year the book was published, customer needs to establish an account before they can place orders online.

The above process involves many steps.

1. Analyzing the problem and identifying the entities and relationships.
2. ER Model
3. Normalization
4. Creating Tables.
5. Implementing Queries
6. Generate Reports
