# ABSTRACT

COVID-19 affects different people in different ways. Most infected people will develop mild to moderate illness and recover without hospitalization. Since COVID-19 is generally thought to be spread from person to person. The people infected with corona virus are supposed to be quarantined for their betterment.

The motive of our project is to help the covid-19 infected people who are in quarantine and also the persons who are delivering the products. The people who are affected with covid-19 are not supposed to come out, which may affect other's health and also it becomes very dangerous to them-selves. They will be in a difficult situation to get their ration. Our website deals with taking the order from the covid-19 infected people and sending the order to the store market. This gives the information to the store that the order they received is from covid-19 infected people. So they can deliver the products with enough precautions. Some of the covid-19 infected people are hiding the information regarding their situation by thinking that they can't get groceries etc, if they are in quarantine and they just silently place the order without saying that they are infected with covid-19, which may leads to affect the delivery person and thus increasing the covid-19 infected cases.

Our website provides a path in fulfilling the daily requisites for human survival who are being in quarantine in this pandemic. Our website is used to provide groceries, vegetables, fruits, medicines etc. The people who need help are suggested to register in the website and add the list about what they require. So that we can provide service to them and help them to receive their orders from the stores through our website with required precautions.

## **SYSTEM REQUIREMENTS:**

### **Software Requirements:**

Platform	-	Windows
Frontend	-	HTML,CSS,java script
Development tools	-	VISUAL STUDIO
Back End	-	Java

### **Hardware Requirements:**

Name of the Processor	-	INTEL CORE i5
Hard Disk Capacity	-	1TB
RAM Capacity	-	8GB
