## ABSTRACT

The clothing/fashion industry accounts for 10% of global carbon emissions, and remains the second largest industrial polluter, second only to oil. This fact somehow doesn't get the same publicity as, for example, the negative impacts of agriculture or plastic waste, but it is something we urgently need to address.

We are going to create a website(the interface) where people can re-sell, buy and donate clothing and learn more about our goal to promote sustainability in this industry. This can be called 'thrifting'. Thrifted items are the items that are loved by a previous owner, but are usually in good shape with enough life left to be useful to a new owner.

## SYSTEM REQUIREMENTS:

### Software Requirements:

Platform	- Windows
Front End	- HTML, CSS, Bootstrap
Development Tool	- Visual Studio
Back End	- Django

### Hardware Requirements:

Name of the Processor	- Intel core i7
Hard Disk Capacity	- 1 TB
RAM Capacity	- 8 GB
