# ABSTRACT

This project concentrates on building a website for 'Hotel Booking'. This project intends to introduce more user friendliness in various activities such as searching for a hotel, booking a hotel room, and getting the location of the hotel. A list of all the services and amenities are some of the things that attract the user/customer. The website gives details of rooms with pictures. Our project aims at developing the customer support mechanism.

The customer can view the deals and can select anything they are interested in just one click. The goal of the project is to establish an interactive user interface which is user friendly. This project explores various aspects of requirement of a website for hotel and tries to go a step further by giving the visitors a sense of being welcomed.

Customers can easily go online with their mobile phones or laptops to browse about hotels within their vicinity. Guests can be able to book for rooms within their budgets after seeing and accessing these hotels within their vicinity.

## SYSTEM REQUIREMENTS:

### Software Requirements:

Platform	-	windows 10 operating system.
Front End	-	html, CSS.
Development Tool	-	Web browser, Boot strap.
Back End	-	JavaScript.

### Hardware Requirements:

Name of the Processor	-	i5
Hard Disk Capacity	-	1tb *
RAM Capacity	-	8 gb.
