ABSTRACT

This project aims at creating Hotel Management System which can be used by the hotel management people (receptionist) to check if there are any rooms left for the customer to check-in and if yes which type of rooms and also helps to book room, order food . It takes the customer details and stores all the information about his expenses from his checkin to check out.

It displays the bill when customer chooses to checkout The Purpose of the whole process is to ease the daily or regular activities of the Hotel Management into an automatic computerized retrievable process. The daily activities includes the Room activities, Entering details of the new customer check in, To allocate a room as per the customer need and interest, Recording the checkout time and details, Releasing or Empty of room and to record the process in a computer system for future.

Due to time constraint and the minimum resources, the system is not made for the high level use. But the Management system can use the application in a very easy and minimum effort.

SYSTEM REQUIREMENTS:

HARDWARE:

- Minimum RAM required : 512 mb
- Minimum disk space required : 50 mb
- input devices : Mouse, Keyboard
- output devices : Monitor

SOFTWARE:

- Atom
- Windows 10 or above
- HTML,CSS,Javascript
