ABSTRACT

Idea: College Community App

- **Visitor Management:**

- The security guard can access the visitor management app with a link.
- While an unknown visitor enters the college he/she is shown a form which they need to fill with the details that is, Visitor name, Purpose of visit, Student name, Student mail id and also an optional provision of a photo. After filling the form the security should submit the details by clicking on the tick mark on the top right corner of the form.
- Then the student receives an email with the filled details. The student can now either accept or decline by replying to the received email. This reply will go to the security guard who will either allow or deny the visitor.
- For further security, if a photo is clicked the student is sent a photo of the visitor in a separate mail to either allow or deny the visitor's entry.
- Use: For safety purposes, and to know who is at the campus other than students at a given time.

SYSTEM REQUIREMENTS:

Software Requirements:

Platform	- Microsoft Power apps
Front End	- Canvas Microsoft Power apps
Back End	- Sharepoint
