ABSTRACT

The skin is one of the largest organs of our body. The question here is, is it taken care of properly? As society keeps progressing our lives have become very fast paced. We do not have a moment of time to spare to look after our health and well being. Skin being one of the most essential organ in our body, why is it neglected? The skin gives our body its shape. In addition, the skin prevents germs from entering the body and damaging the essential internal organs. Meanwhile, our hair and nails are also a part of the skin which also protect our body. Your skin reflects your state of health. If our skin is healthy, we are healthy and live happily.

The influence of our skin in our daily life plays a very prominent role. Yet the importance of skincare has not been emphasized enough by the Indian society. Slowly, but surely people are coming to realize its significance and mending their previous ways. The skincare industry in India is also growing and will make its way into the spotlight very soon. To help this growing industry and make people more confident in themselves research and awareness are necessary to spark a change and help people live filter free. There is also this preconception that skincare is only for women and not men. How have such stereotypes come into play?

Therefore, the aim of this project is to create a dynamic website to raise awareness about our skin and help both men and women build their skincare regimen.

SYSTEM REQUIREMENTS:

Software Requirements:

| | |
|------------------|-------------------|
| Platform | - Linux |
| Front End | - HTML, CSS |
| Development Tool | - PHP |
| Back End | - MySQL databases |

Hardware Requirements:

| | |
|------------------------|----------------|
| Name of the Processor- | Intel i5-8350U |
| Hard Disk Capacity | - 500 GB |
| RAM Capacity | - 16 GB |
