ABSTRACT

The main objective of this project is to PROMOTE RECOVERY or SAVE LIFE. It is a mobile application ,which gives user an instant access to the information that user needs to know i.e the most common problems/situations about health issues. It helps to give immediate assistance to the user suffering from either minor or serious illness before taking full medical treatment. This helps to prevent further injury or deterioration and promotes recovery. This project reassures the victim and make the user as comfortable as possible.

Many people don't know what to do when they gets affected from sudden attacks, sickness or injuries. Many lose their life or may get into serious illness or injuries as they don't have proper awareness about First aid. So in order to avoid this kind of things this application gives access about the most up to date First aid information anytime and anywhere to the user in a detailed comprehensive manner. This first aid information can save the life of the victim by giving immediate assistance until the victim takes complete medical treatment.

SYSTEM REQUIREMENTS:

Software Requirements:

Platform	- Notepad
Front End	-Html
Database	-Oracle
Back End	-Java
Operating System	-Windows 7/Windows 10

Hardware Requirements:

Name of the Processor-	15
Hard Disk Capacity	-1TB
RAM Capacity	-8 GB
