DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

<GN-R-18> (2022 - 2023) II B.Tech II Sem Hobby Project
on "MEDIEASE"

Abstract

Healthcare project that aims to address some of the critical challenges faced by the healthcare industry today. Project is focused on reducing medicines wastage, promoting basic health precautions, and providing access to online doctor appointment booking and a web platform that allows users to store and manage their health documents. In addition to these features, this platform also includes medicines reminders, a blood donation section which will allow users to sign up as donors or find blood donation centers near them. This feature will help bridge the gap between blood donors and patients in need of blood transfusions. the latest health news updates, and a funding section for cancer patients.

We believe that these features will help our platform stand out from other healthcare services available in the market. Ultimately, the goal of the project is to provide a centralized platform for essential healthcare services that can help individuals take better care of their health and well-being.

II/W & S/W Requirements

Passport.JS used for authentication
MongoDB for storing data
Node.js+Express used to develop server-side application
EJS,CSS & JS used for frontend
Socket.io used for chats
