"Social Media Blocker Extension"

Abstract

Website blockers have users enter a list of specific websites (often called a "blacklist") to block for certain time periods. Users enter the maximum amount of time they would like to spend on specific websites before being blocked. So users can allow themselves some time for idle browsing.

Social media blocker is an extension which will not allow usage of social media websites while working with warning. This extension will help in improving productivity. One of the biggest advantages is its versatility. Users can set time limits for as many websites as they like; all they have to do is type them into the extension. As long as Google Chrome is being used, the extension will work on various platforms

Extensions tell your computer which application created or can open the file and which icon to use for the file. Extensions can be added to browser which could track the blacklisted websites. Extension can be used in educational institutions to forbid the use of social media in professional environments

S/W Requirements

- Frontend: HTML, JSON, JavaScript, CSS

H/W Requirements

- Processor: Intel iCore 2 duo or more
- RAM: 8GB or more
