Placement Training summary
(Academic year-2022-23)

In the academic year 2022-23, COIGN Consultants Ltd. conducted a Campus Recruitment Training initiative, benefiting 413 second-year engineering students representing a variety of engineering disciplines. The primary objective of this endeavour remained consistent: to prepare these students for job assessments and interviews conducted within their college campus. To accomplish this, the program placed special emphasis on imparting coding skills, specifically focusing on C programming, Data Science (C&DS), and an Introduction to Web Technologies. The program incorporated regular assessments and tests as valuable tools to assess student progress accurately and identify areas necessitating additional support.

The results achieved through this commendable initiative were truly remarkable. Students not only demonstrated improved technical proficiency in areas like C&DS and web technologies such as HTML but also nurtured newfound self-confidence. This boost in self-assurance played a pivotal role in their success during job interviews, leading to a significant number of securing positions in respected companies. This program underscored the profound importance of not just acquiring technical skills but also fostering self-confidence, an essential element as students embark on their professional pathways and effectively bridging the gap between their academic education and the real-world job prerequisites they encountered.
