Placement Training summary
(Academic year-2018-19)

In the academic year 2018-19, Conduira Education & Training Service Pvt. Ltd. was involved in a Campus Recruitment Training program for 550 engineering students from all engineering streams. The main goal of this program was to help these students prepare for job assessments/interviews that take place on their college campuses. To achieve this, the program focused on training them in coding skills in C programming and Data Science (C&DS), and later, Java coding. The program was designed very carefully. It had a well-organized plan that covered everything students needed to know for their future job interviews. Expert trainers guided the students every step of the way. The program also included regular tests to see how well the students were learning. These tests helped identify areas where students needed more help so that they could improve. The results of this program were impressive. Students not only became better at technical skills like C&DS and Java coding, but they also gained more confidence in themselves. This newfound confidence played a big role in their success during job interviews. Many of them secured jobs in well-respected companies. This program showed that it's not just about learning technical skills; it's also about building self-assurance, which is essential as students start their careers. Conduira's dedication to improving both coding abilities and self-confidence made a significant impact on these students, helping them bridge the gap between their education and real-world job requirements.
