(57) Abstract :
 [033] The present invention discloses a machine learning based system for providing a biomedical user interface. The system includes, but not limited to, at least one processing unit; non-transitory computer-readable media storing instructions which, when executed by the processing unit, instructed to: a knowledge discovery database located physically at a range of disparate locations, as may the users and resources and based upon factors such as the user identification, the user type, the user function, the user environment, and so forth, the system can provide specifically-adapted interfaces for interacting with the knowledge discovery database.
