(57) Abstract:

Cyber hacking is a very big digital problem in the present time, in which cyber criminals affect a person by stealing computer and personal information. And affect so much that that person suffers financial loss or gets into such a problem that after leaking his personal information, it becomes a big problem for him to open the information related to his home and business, becomes. To solve the above problem, we build software based on a digital artificial intelligence technology, and this software immediately sends an alert on the mobile in the form of a message as soon as a person's computer is hacked. That person immediately succeeds in putting his computer or his digital device on security mode. If the person is not alert at the time of digital warning, then this technique is successful in automatically turning off that computer or device.
